

10 lateral dimension and a longitudinal dimension, wherein said mat
lateral dimension extends beyond the lateral confinement of said
safety seat and has a flange outwardly extending at least 1 inch
from said conformal surface and around at least a portion of the
perimeter of said mat to define a containment area for
15 containment of liquid spills within said mat, and said mat
longitudinal dimension further extends beyond the base of said
safety seat and into said foot well.

11. (Once Amended) A device for a moving vehicle having an
[protecting the] interior seat, seat back and foot well [of a
moving vehicle] for protecting said interior seat, seat back and
foot well from being soiled by a child in a safety seat,
5 comprising:

a mat having a perimeter and having a conformal surface for
placement between a safety seat having a base and a lateral
confinement, and the seat of a vehicle, said mat having a lateral
10 dimension and a longitudinal dimension, wherein said mat lateral
dimension extends beyond the lateral confinement of said safety
seat at least 2 inches, and has a flange extending outwardly from
said mat surfaces at least 1 inch from said mat conformal
surface, said flange extending around the perimeter of said mat
15 to define a containment area for containment of liquid spills
within said mat, said mat also contains a pass-through for a
